

I oppose the installation of 5G technology because it is close to the same frequency and higher to your household microwave. What happens to something when placed in the microwave on high power? It DIES! Microwave technology is unsafe and the frequencies used by it can be unsafe to humans such as causing cancer and other illnesses and even death if exposed to high power antennas that are being proposed to be installed in US cities across America at road or even street level. Is our government so stuck up on making the mighty dollar to care about the health of human life? I know this document will probably be ignored by big corporations that want to make money off 5G technology but have a human soul on this subject. This technology can kill birds and other animals and I do not want this in my city or any city in our great country of the United States Of America.

Here are Html links to support my opposition to 5g:

<https://www.lifeenergysolutions.com/blog/5g-is-killing-birds/>

<https://ehtrust.org/scientific-research-on-5g-and-health/>

They basically say the tests confirmed lab animals developed CANCER.

So STOP 5G and future use of MICROWAVE RADIO FREQUENCIES FOR COMMERCIAL USE.
